The basic details like the Company, Branch driver, IMEI and the Object number will be shown.

In this report you will be able to see data regarding the distance traveled by the Object for the selected duration along with the duration related information like the running duration taken to cover this distance, idle duration, stoppage duration and inactive duration. Other information like average and maximum speed attained by the object and alerts generated if any will be shown.

There is the playback option available which shows the route taken by the object to cover the distance traveled. When you click on the playback button a new window will be opened which will show the playback route of the object as seen earlier in the Live Tracking screen.
